

WHEN YOUNG PEOPLE LOSE SOMEONE

Adolescence is full of shifting relationship dynamics – most of us remember how hard it was as a young person to say goodbye to someone we cared about after a breakup, a big fight with a friend, or a loved one passing away. The current young generation – Generation Z – is facing these normal coming-of-age challenges on top of the frequent grief that comes with living in modern society. Youth these days are experiencing tremendous, and often consistent, losses as they grow up during a pandemic, regular mass shootings, and increasing rates of youth suicide and domestic violence.

HOW LOSS AND GRIEF IMPACT YOUTH

Everyone handles loss in their own way, and youth are no different. Their reactions can depend on many things, like age, gender, personality, type of loss, relation to the person lost, amount of support around them, and more. But they will all need consistent attention, reassurance, and care as they adjust. Below are some common signs of grief in different age groups.

AGES 5-12

Elementary and middle school-aged children may struggle to understand loss, whether it comes through death or other change. Look for these signs:

- » Self-blame for the loss
- » Seeming distracted, forgetful
- » Increased anxiety (often related to loss – fear of others dying, friends abandoning them, the future)
 - » Increased attachment to caregiver(s)
 - » Avoidance of school
- » Physical symptoms (especially stomachache and headache)
- » Withdrawal from usual activities
 - » Behavior issues (aggression, tantrums, defiance)
 - » Changes in eating and sleeping habits
 - » Temporary regression in age-appropriate development (bed-wetting, baby talk, etc.)

AGES 13-18

Teenagers are already in a time of big transition and grief can influence how they move from dependence on caregivers to independence. Look for these signs:

- » Seeming distracted, difficulty concentrating
 - » Withdrawal, needing more alone time
- » Taking on adult responsibilities, taking care of those around them
 - » Difficulty expressing emotions
- » Increased anxiety (often related to loss – fear of others dying, friends abandoning them, the future)
- » Questions about death and dying
 - » Using jokes and humor to mask/minimize the loss
 - » Physical symptoms (especially stomachache and headache)
- » Getting into trouble, risky behavior to escape or find comfort
 - » Temporary regression in age-appropriate development (independence, confidence)
 - » Strained relationships
 - » Worsening self-image, self-esteem, confidence

FAST FACTS

In the first 15 months of COVID-19, over 140,000 children in the U.S. lost a primary or secondary caregiver.¹

Sixty-five percent of the youth who have lost a primary caregiver due to COVID-19 are Black, Indigenous, and/or people of color (BIPOC).²

LGBTQ+ youth are 120% more likely to experience homelessness than their straight and cisgender peers, primarily because of rejection by and loss of their family of origin.³

Firearm-related deaths among children and adolescents increased 30% between 2019 and 2020.⁴

The suicide rate for youth ages 10-14 nearly tripled between 2007 and 2017.⁵

In 2019, nearly 9% of high school students said they had attempted suicide at least once in the previous 12 months.⁶

Fatal overdoses among adolescents increased by 94% from 2019 to 2020.⁷

SUPPORTING YOUTH THROUGH GRIEF

VALIDATE FEELINGS AND REASSURE SAFETY

Loss is often confusing and can impact a young person's sense of safety in the world, whether from physical harm and death or from abandonment and emotional pain. Lead with comforting them and acknowledging how hard this must be. Reestablishing safety isn't a quick process, but reminding them that one loss doesn't mean others will follow is a good start.

MAINTAIN STRUCTURE

Young people often rely on the adults in their life to help them stay regulated, especially during times of significant change. Help them stay consistent with their typical daily activities and schedule and avoid other unnecessary changes until you notice them starting to return to their old self.

ANSWER QUESTIONS HONESTLY

Kids have active imaginations and are likely to start filling in the details they don't have as they try to navigate a loss. Listen to their thoughts and questions, and don't be afraid to get sad or say that you don't know. Young people need to hear the truth from someone they trust.

CONSIDER CULTURE

Remember that different cultures and families have different views of death and mourning. Children will likely process grief based on how the people around them handle loss. They usually pick this up from family members but may also have ideas about grief from their peers or media. If a child is struggling, allow them to process the loss in the way that comes naturally to them – as long as it's not harmful to themselves or others. Connect with the child's other communities (school, place of worship, neighborhood, etc.) if you need help facilitating healing.

CONNECT TO PROFESSIONAL HELP

Additional assistance is never a bad idea, and resources like counselors or support groups can help youth feel less alone in their grief. Check out the National Alliance for Children's Grief (childrengrieve.org/find-support) to find services in your area.
